

LEDA FAQ

How to setup the tiles?

Each player places their tiles randomly, without them necessarily being a mirror of the opponent's setup.

What happens when the fruit stock is empty?

Fruits are considered infinite. You can use any substitute to represent them (cubes, coins, tokens).

How do -1 and -2 effects work?

This is not a passive effect. This effect activates when the card is in the activated zone of the turn.

When this happens, you can immediately play a card. Its Food cost is decreased by the amount indicated by the pictogram on the card.

If I play a card during the Activation phase, can I activate it immediately?

Yes, if the card you play is played inside the zone currently activated.

Be wary, each space (whether it is a card or a tile) can only be activated once each turn.
